October 6, 2014

1 Manifest File

Since Joomla doesn't use images in the backend menus the image links can be removed from the manifest menu area.

2 List Views

Joomla now allows for the list views to be implemented as forms. to do so a corresponding filter_VIEWNAME XML file needs to be created and given over to

3 MySQLi

MySQLi is the new standard in MySQL. It supports many of the same functions as regular MySQL using a different syntax, and many functions are no longer supported.

3.1 New Syntax

Concatination

3.2 No Longer Supported

DATE_FORMAT
